Continuation of 11. does NOT place the application in condition for allowance because:

Applicant's after Final amendment has been entered for purposes of appeal and the 112 rejections are withdrawn.

The examiner is appreciative of the applicant's efforts to further prosecution, however, this amendment does not place the case in a condition for allowance.

Applicant's argument is that the invention is patentable because it is drawn to a clinical study. The evidence of obviousness that the examiner has provided is for medical regimen, and clinical studies are medical regimen.

The Finality of the rejection is maintained.

Note: It is significant that applicant did not cancel claims 8, 15 and 18 which duplicate the portability of limitation (1). For completeness, the examiner's 103 rejection addressed both limitations (1) and (2) as being required. This after Final submission makes clear that only 'one of' (1) or (2) actually is required. This further supports the examiner's finding that the claims are much broader than applicant argues.

The amendment also arguably introduces a new embodiment in that claims 9 and 19 now appear to include 2 separate input devices connected to the network while the disclosure describes only one input device being connected to the network. Nonetheless, the examiner has refrained from not entering the amendment based upon this defect because the examiner finds this is an obvious configuration taught by the relied upon art. Still, the applicant should have responded to the objection to the drawings. The drawings are described as flowcharts for the method, and there is no drawing which shows the claimed system(s).
